18ai | Industry AI Solutions

Software Engineering | Banking Technology | Health & Wellness Education

Practical AI solutions, trustworthy systems and measurable business outcomes. This document describes solution blueprints and proposed engagements rather than established commercial product availability.

01 / Software & IT

Accelerate complex engineering through AI-supported software lifecycle patterns.

• Legacy service reverse engineering and design recovery

• Requirements and specification to architecture, code and tests

• Code change impact mapping, modernization and regression evidence

02 / Banking & Financial Services

Improve engineering execution with strong governance and domain context.

• API, WSDL, Swagger and data integration intelligence

• Policy-aware knowledge retrieval and traceable documentation

• Evidence-driven test generation, change governance and human approvals

03 / Health & Wellness

Explore lower-risk AI opportunities grounded in safety and human expertise.

• Instructor-reviewed yoga and healthy-habit education

• Administrative workflow and content automation

• Accessible, multilingual wellbeing education with privacy controls

04 / AI Anatomy

A reference architecture for responsible applied AI.

• Business data and domain context → retrieval and provenance

• Model and reasoning layer → tools/APIs/MCP → orchestration

• Evaluation, permissions, security, human-in-the-loop and audit

05 / Research & Emerging AI

Research-led advisory, not unsupported frontier capability claims.

• Generative AI, multimodal systems and context engineering

• Agentic workflows, tool protocols, model evaluation and risk

• AGI research literacy and scenario-based future planning

06 / Delivery Model

Start with measurable business need and controlled proof.

• Discovery and value hypothesis

• Solution design, risk and evaluation plan

• Pilot, independent review, outcomes and scale decision
